# Three steps to maintaining security best practice while home working.

Don't let your guard down and fall for a phishing attack.
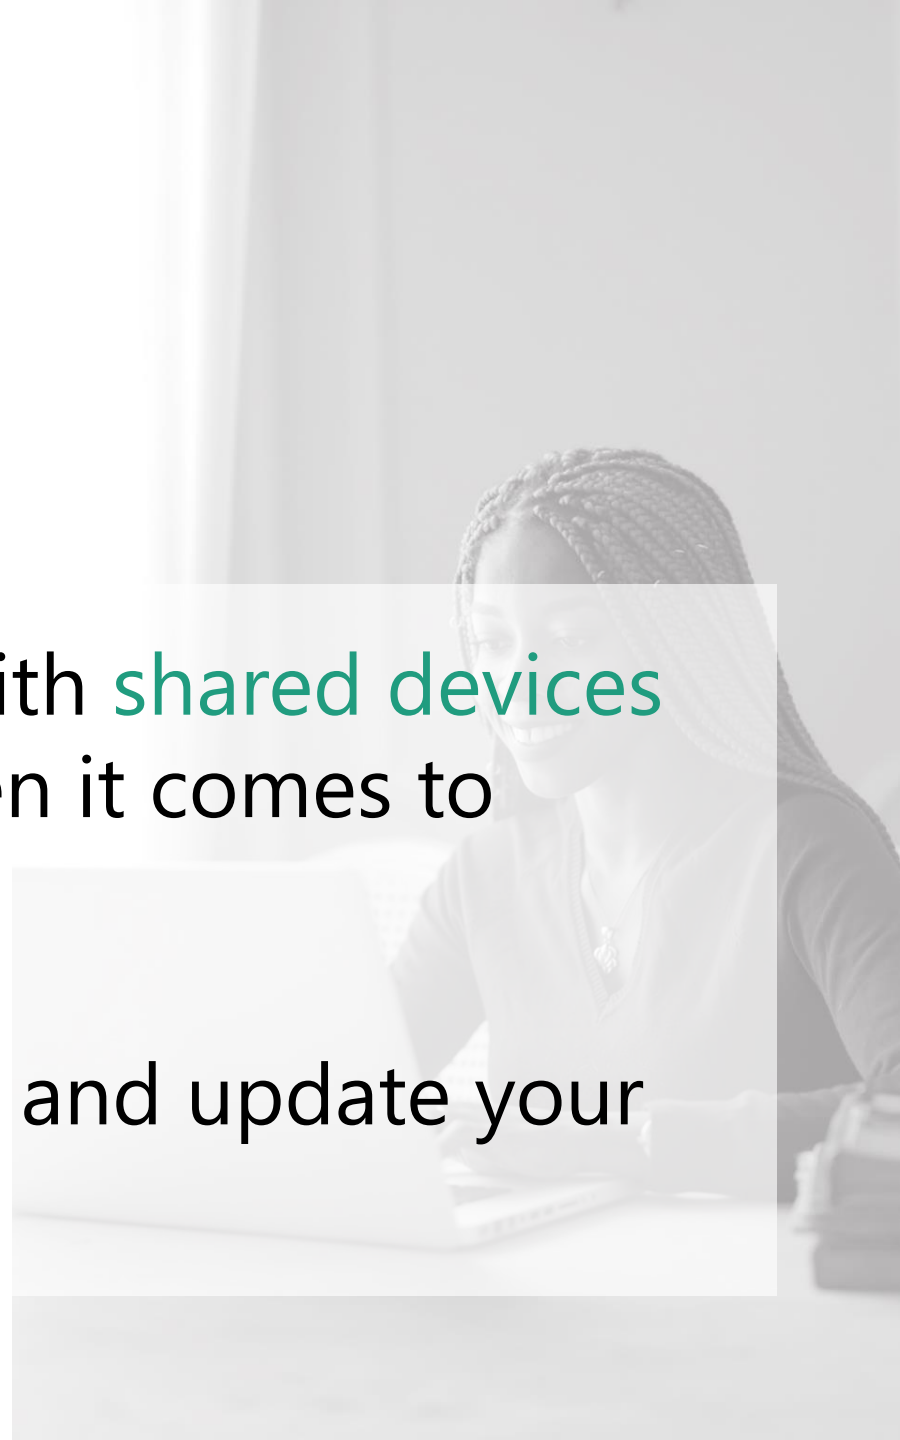

- Ask for some relevant training to help you identify risk.

- Read your company policy on cyber security.

2

Take extra care when using your home laptop or computer.

⊚ Be vigilant of other users with shared devices as they could pose risk when it comes to cyber threats.

⊚ Educate fellow users, install and update your Anti-Virus and Malware

3

Be GDPR aware and compliant just as you would at work.

- Make sure portable storage devices, like USBs are locked away securely.

- Lock your device and don't leave confidential information where it could be exposed to visitors.
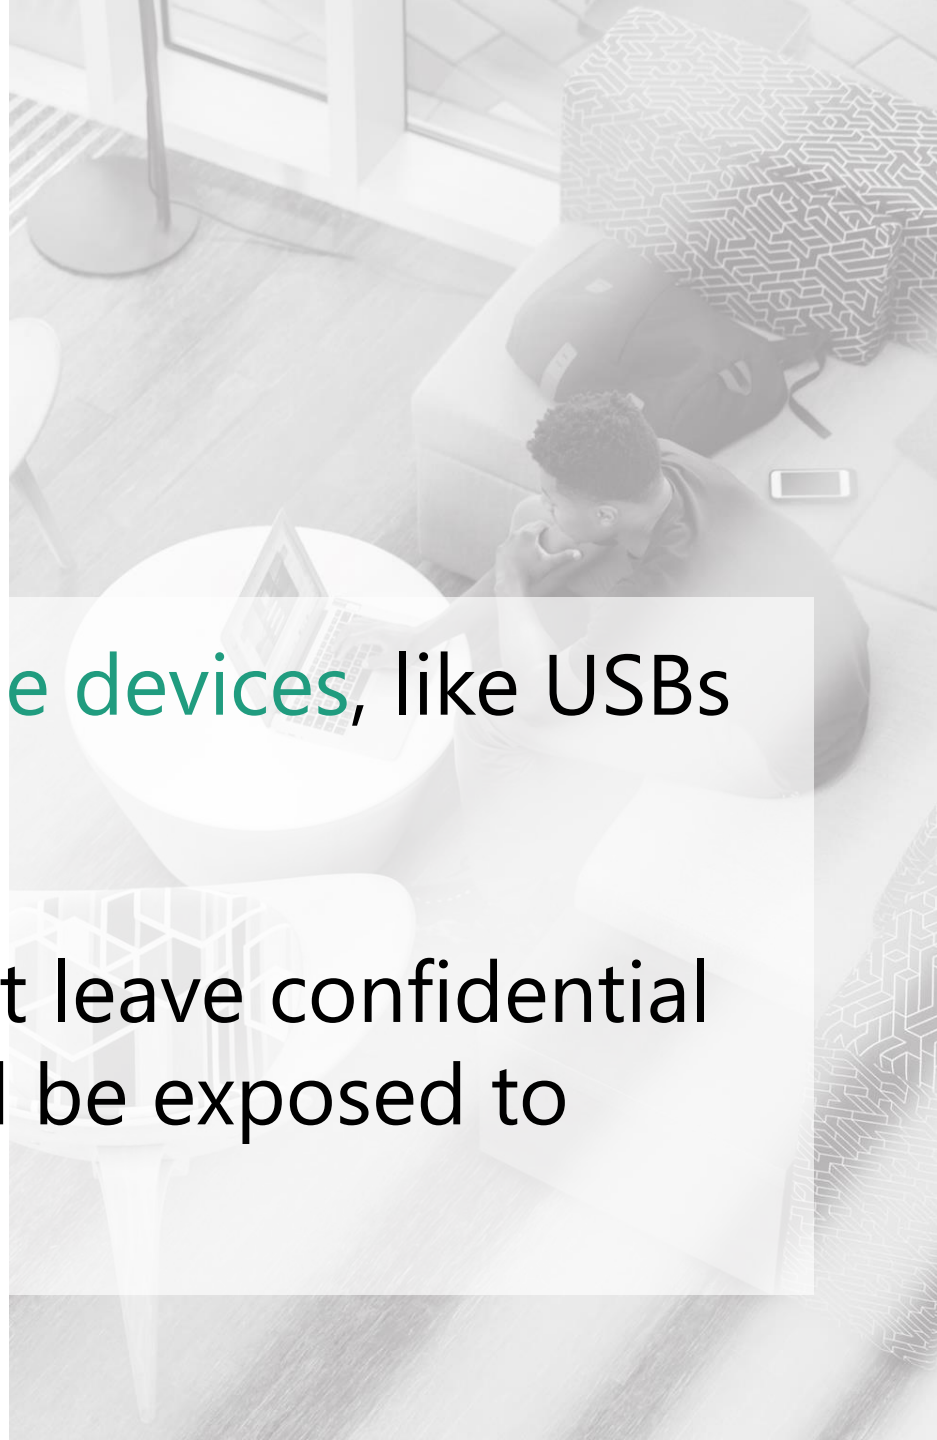

If you're an employer, what can you do to maintain security best practice of your staff?

- Educate your users on cyber threats.
- Make your users read and acknowledge your policies on home working, security and BYOD.
- Enforce two-factor authentication
- Only allow approved devices to connect to company networks.
- Give staff access the data they **need**
- Use a VPN to secure web traffic
